

FIG. 1 is a perspective view of a device 100 in accordance with the present invention. The device 100 includes a handle 110 and a head 120. The handle 110 is formed of a material having a high tensile strength and is provided with a series of longitudinal grooves 112. The head 120 is formed of a material having a high impact resistance and is provided with a series of transverse grooves 122. The device 100 is adapted to be used as a tool for cutting or scraping.
